The Cherry Tree Wind Farm will generate enough clean energy to power 30,000 homes in the state of Victoria. Creating around 80 jobs during the construction phase and five full time positions once operational, Cherry Tree is anticipated to reduce CO2 emissions by around six million tonnes – the equivalent of taking 60,000 cars off the road every year.

As part of this project, John Laing and Infigen have engaged with the local community, including establishing a Community Benefit Fund that will ensure A\$25,000 is made available to the community every year for the first 25 years of operation. Community groups can apply for grants from the fund once construction is complete.

About us

John Laing is at the forefront of proactive and pioneering infrastructure and renewable energy project delivery around the world. We actively invest in, develop and manage high-value and long-term projects that blend strong social impact and commercial viability, delivering clear returns for everyone involved with our business. We work to a clearly stated purpose:

To create value for all our stakeholders by investing in, developing and managing infrastructure projects which respond to public needs, foster sustainable growth and improve the lives of communities around the world.
