Kiata wind farm became operational in late 2017, and produces enough clean energy to power 20,000 homes. At the time of installation, the turbines on the site were the largest in the country.

## About us

John Laing is at the forefront of proactive and pioneering infrastructure and renewable energy project delivery around the world. We actively invest in, develop and manage high-value and long-term projects that blend strong social impact and commercial viability, delivering clear returns for everyone involved with our business. We work to a clearly stated purpose:

**To create value for all our stakeholders by investing in, developing and managing infrastructure projects which respond to public needs, foster sustainable growth and improve the lives of communities around the world.**
